

TRIQUA International BV – Company Profile

Triqua International BV– a dynamic, innovative company based in the Netherlands – realizes turnkey projects for water treatment with a focus on membrane bioreactors and membrane filtration projects. We have realized both industrial and maritime water treatment plants, for treatment on land, ships and at offshore installations. The supply scope can range from design only, or equipment supply, up to full-scale turnkey projects.

Triqua has proven its ability to provide custom made water solutions with the numerous references it has in the industry, offshore, marine and domestic market. We start where conventional technologies stop. Most of the solutions we have implemented are unique and innovative applications. We have also conducted an impressive number of lab and pilot scale tests which have contributed to our broad knowledge of water and wastewater solutions.

We do not think end-of-pipe only, but can also provide in-process solutions.

Our service does not end after commissioning. We have standard service contracts, which include scheduled service visits and internet-based management communication systems.

Our services

- Problem analysis, desk studies and process optimization
- Laboratory and bench scale testing
- On-site pilot testing
- Process design
- Main and detail engineering
- Assembly and on-site construction works
- Commissioning and start-up
- Service contracting
- Help desk and after-sales

Our technologies

- Pretreatment
- Membrane filtration (produced and process water)
- Biological wastewater treatment (Aerobe & Anaerobe systems)
- Moving Bed Bio reactors (MBBR)
- Cross-flow membrane bioreactors (MemTriq®)
- Submerged membrane bioreactors (SubTriq®)
- Post treatment
- Re-use of treated water

Triqua aims to achieve the most efficient and economical solution for water treatment in close cooperation with the client.
